DOLPHIN ENERGY CLUB EXPERIENCE

On February 1, 1993, Bob's wife June phoned to request energy to assist his healing (they are Dolphin Energy Club members). For over two months this man had suffered from pervasive neuralgia with painful, inflamed joints–shoulders, hands, knees, and ankles. The symptoms began after an influenza immunization, but doctors also suspected post-polio syndrome. Ten fellow DEC members were requested to direct energy to Bob from February 6th through February 20th.

Bob writes: "On Friday, February 5th, I had hit bottom with the aches and pains that had wracked my body for two and a half months and the doctors were very concerned that I had some severe nerve muscle disease which was destroying my muscle structure and they could not identify the problem. I had reached the point where I could not use my left leg going upstairs and both legs and left arm had lost all range and strength, similar to when I had polio in 1954.

"When I hit bottom on the 5th I'm sure that my heart rather than my head finally opened up to all the energy coming my way and I started getting a little rest on the ensuing nights. My healing took place on the night of February 9th, as I awoke at 5:00 a.m. on the 10th and all the aches and pains had disappeared and I could use my left leg going up and down stairs. I had been under the care of four different specialists at the UCLA Medical Center and they were completely mystified with my dramatic turnaround to the point that they were commenting that my case should be written up in their medical journals.

"My muscles have atrophied over the past two and one half months, but I am starting physical therapy and should be as good as new in six weeks. I gratefully give thanks to all of those members of DEC who participated in the sending of the healing energy which helped in my dramatic healing."

DEC members varied in their perception of the root cause of Bob's condition. However, all made accurate comments on his physical and emotional status. A woman envisioned him "at the top of marble stairs of a big house, hand on left hip, looks weak, staggers" and saw that the emotional body map was "often painful." She experienced a headache

while working and said the “dolphin acted like a suction cleaner to eliminate diseased cells.” For one “there was a storm of emotions going on within Bob’s emotional body.” He felt that “gremlin-like” creatures were dislodged from this area. Another had grown up in the same location and was pleased with that connection. She felt “great joy and love for him, in him, with him” and ended by picturing “him walking on the Strand by the beach, happier and more peaceful.” All different approaches to the same goal: activation of the inherent healing potential we all share.
